

# Hướng dẫn tạo file exe với Exe4J

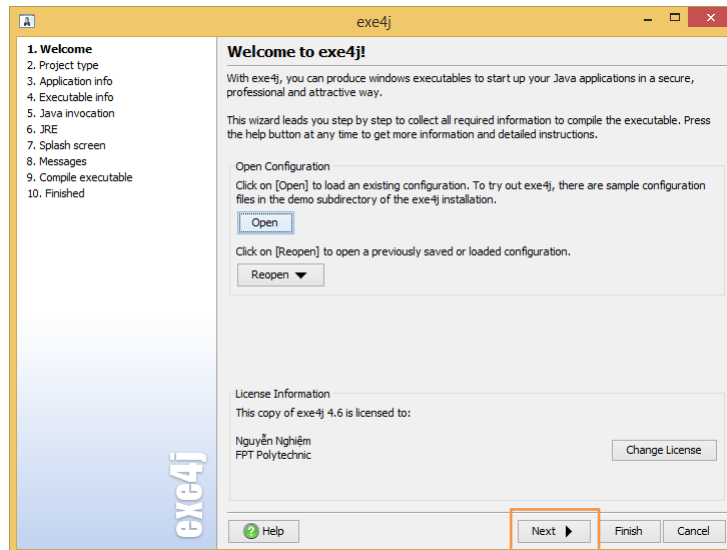

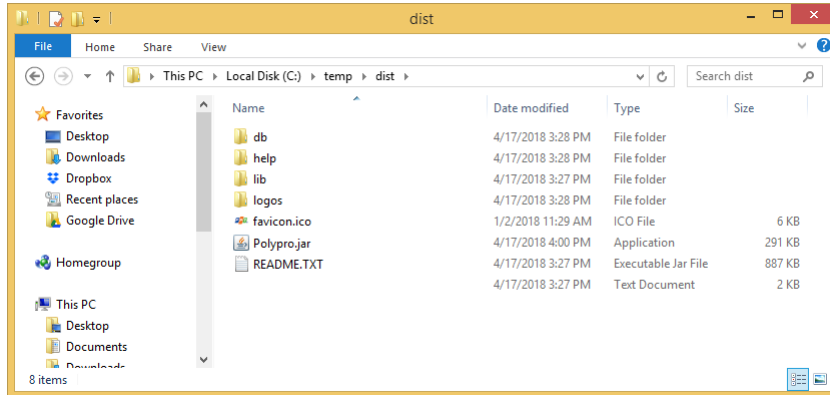

**FPT POLYTECHNIC**

## CHUẨN BỊ TÀI NGUYÊN ĐÓNG GÓI

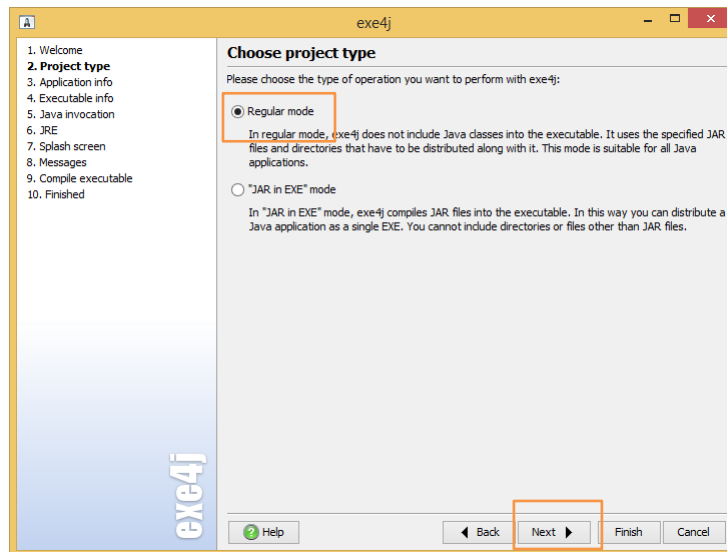

The image shows two screenshots of an IDE. The left screenshot shows the 'Projects' tab with a context menu open for the 'Polypro' project, highlighting the 'Clean and Build' option. An orange arrow points from this menu to the right screenshot. The right screenshot shows the 'Files' tab of the same project, displaying a directory structure. A 'dist' folder has been created at the root of the project. A callout box points to this folder with the text: 'Chép các thư mục và file cần đóng gói vào dist' (Copy the folders and files to be packaged into dist). The directory structure includes folders like 'build', 'db', 'dist', 'help', 'lib', 'logos', 'nbproject', 'src', 'test', and files like 'Polypro.jar', 'README.TXT', 'build.xml', 'favicon.ico', and 'manifest.mf'.

Chép các thư mục và file cần đóng gói vào dist

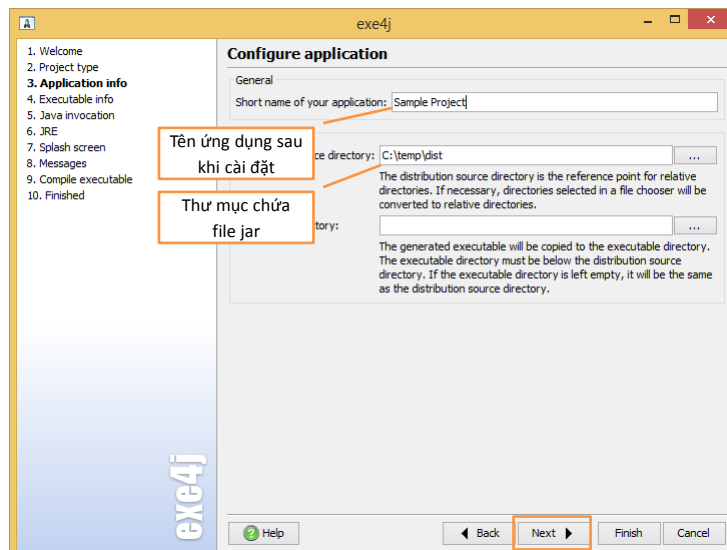

### Toàn bộ tài nguyên phần mềm cần đóng gói

## TẠO EXE KHÔNG CHỨA FILE JAR

## TÊN ỨNG DỤNG VÀ THƯ MỤC JAR

## TÊN EXE, BIỂU TƯỢNG VÀ MÔI TRƯỜNG

**Configure executable**

Executable type: ☒ GUI application  
☐ Allow -console parameter  
☐ Console application  
☐ Service

Executable name: Polypro .exe

☒ Icon File: C:\temp\dist\favicon.ico

☐ Allow only a single running instance of the application

☒ Fail if an exception in the main thread is thrown

☒ Change working directory to: . (relative to executable)

**Advanced Options**

- Redirection
- Service options
- Version info
- 32-bit or 64-bit**
- Execution level

Annotations:

- Tên file exe sau khi chuyển đổi
- Biểu tượng của file exe
- Môi trường chạy

## MÔI TRƯỜNG 64 BIT

**Select the architecture of the generated executable**

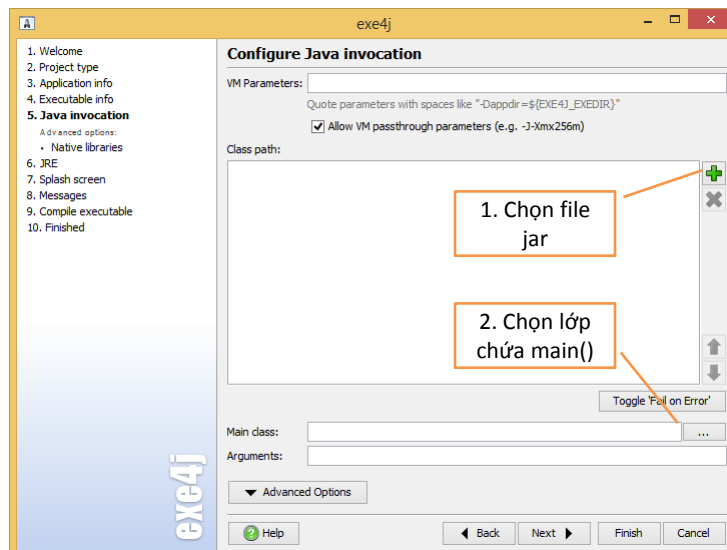

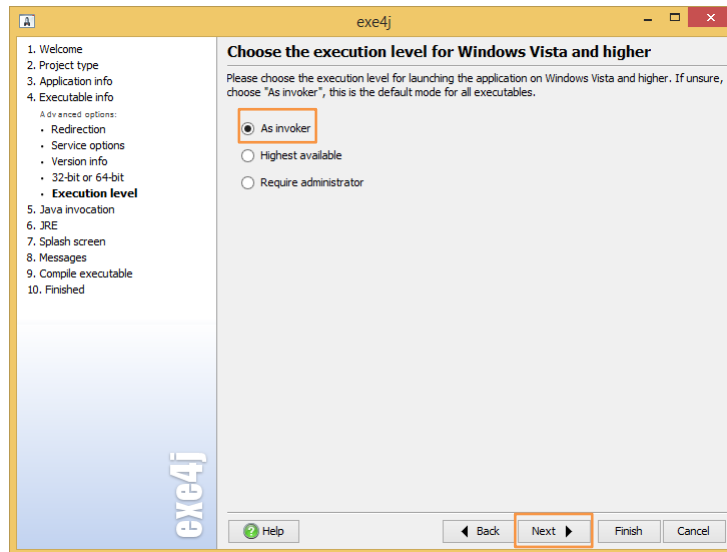

If the application should run with a 64-bit JVM, you can choose to generate a 64-bit executable.

Please note that the launcher will not run with 32-bit JVMs in that case. This means that it will not run on a 32-bit Windows at all.

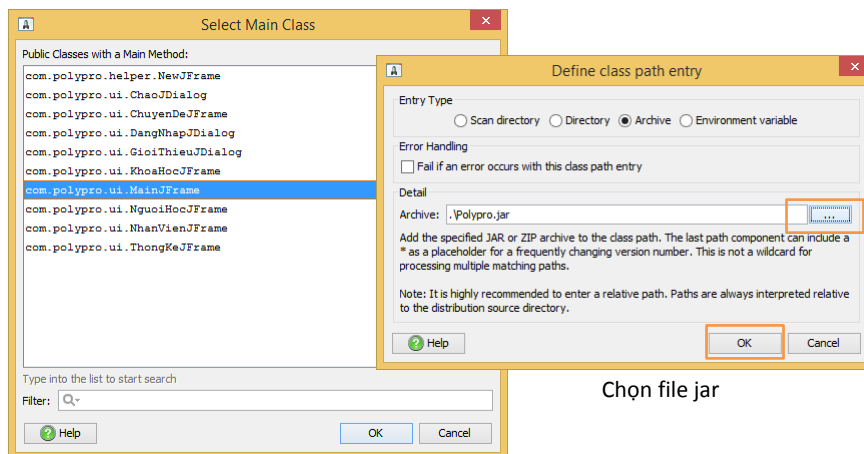

☒ Generate 64-bit executable

Annotations:

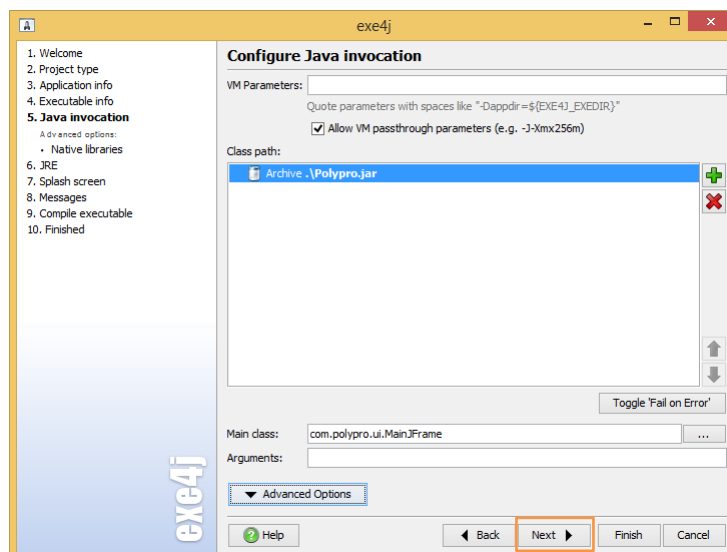

- Generate 64-bit executable

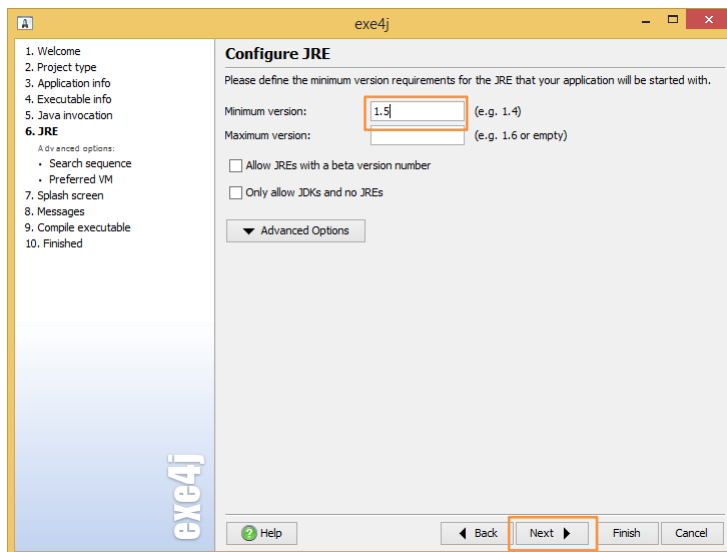

## CHỌN FILE JAR VÀ LỚP CHỨA MAIN()

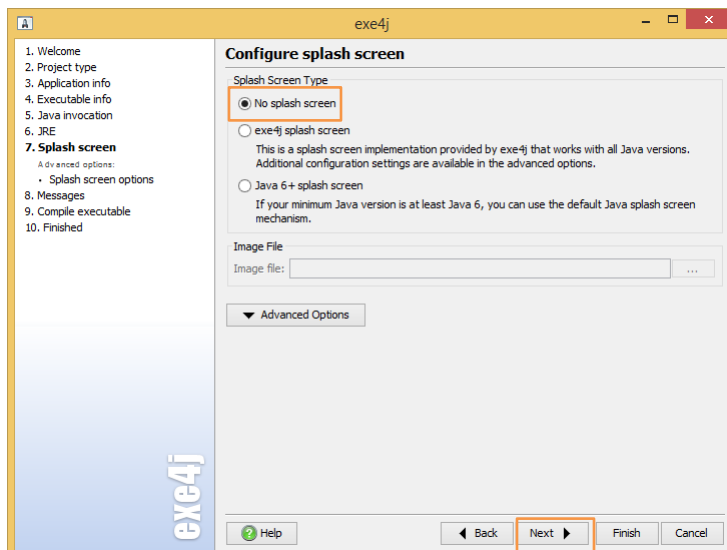

## ĐÃ CHỌN FILE JAR VÀ LỚP CHỨA MAIN()

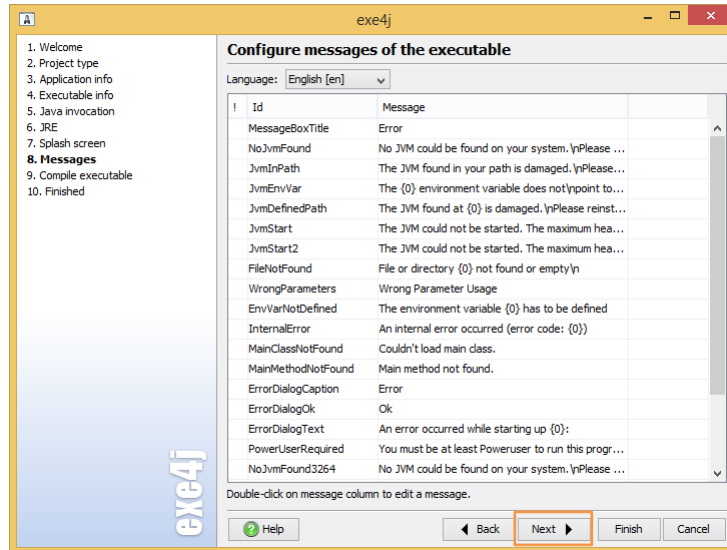

## CHỌN MÔI TRƯỜNG JDK TỐI THIỂU
